

Fire/Life Safety Educator Certification

Levels I, II, III

Jim Long, Commissioner
State Fire Marshal

North Carolina Fire & Life Safety Educator Certification

In a continued effort to reduce fire loss in the State of North Carolina, the State Legislature established General Statute 58-78-5.14b, which requires the State Fire and Rescue Commission to establish voluntary minimum professional qualifications for all levels of fire and rescue service personnel.

The standard for Fire & Life Safety Educator Certification is considered to be a minimum standard and the Fire & Rescue Commission fully recognizes that, due to differing requirements, many fire departments may set forth standards much higher than these for their personnel. It is the intent, however, that through a voluntary program, personnel who provide fire and life safety education services to the communities of our state, will meet or exceed this standard.

Performance Standard

The NFPA 1035 Standard for Fire and Life Safety Educator Professional Qualifications, Current Edition, will be the performance standard used for Fire and Life Safety Educator certification.

Note: The Commission manuals shall take precedence over the NFPA Standard whenever conflicts arise between the testing, administrative, or requirements.

Entrance Requirements

The Fire and Life Safety Educator candidate must meet the entrance requirements listed below before certification can be issued.

Age / Education Requirements

The candidate must be at least 18 years of age. Training and course work may be completed in advance, but certification cannot be issued until the candidate's 18th birthday. Moreover, the candidate must meet the requirements of the standard in place at the time of his/her birthday even though he/she may have been working toward a previous standard.

The candidate must have a high school diploma or equivalent recognized by the State Department of Public Instruction (i.e., GED).

Program Requirements

The instruction and evaluation given a Fire & Life Safety Educator who achieves certification is critical to ensuring a quality program. Training and evaluation of students must be accomplished by qualified individuals, working in conjunction with approved delivery agencies.

The student must be a member of a North Carolina Fire/Rescue Agency to receive certification.

Student Evaluation

Evaluation of the student for certification is a critical link in the total preparedness of the individual. Student evaluations must be accomplished by qualified Level II Instructors serving as proctors. The evaluation itself must be separate and distinct from the training process.

Written Examination

The written exam measures the cognitive skills of the Fire & Life Safety Educator and must follow the guidelines set forth under the Policy for Testing manual. The examination will be randomly generated and provided to the evaluator by the delivery agency. A score of 70% or above shall constitute a passing grade for the candidate.

Reciprocity

Any Fire & Life Safety Educator certified by another state or agency whose program is accredited by the International Fire Service Accreditation Congress (IFSAC), or the National Board of Fire Service Professional Qualifications, and is a member of a fire/rescue agency in North Carolina may be granted equivalent certification provided the agency was accredited at the time of his/her certification.

Certification Authority & Records

Certificates for Fire & Life Safety Educators will be issued by the Commission Office when the candidate has met the requirements for certification.
