Smoke Detectors in Residential Aircraft Hangers

Code: 2012 Residential Code  Date: July 2, 2012
Section: R314.3

Question:
Are smoke detectors required in residential aircraft hangers when no electrical service is installed?

Answer:
Residential aircraft hangars are not addressed in the Residential Code. However, the General Statutes require that all buildings and structures must meet the State Building Code. In this case, residential aircraft hangars must meet the requirements of Section 412.5 of the 2012 Building Code which specifically addresses residential aircraft hangars. Section 412.5.3 requires smoke alarms in residential aircraft hangars. Section 907.2.21 requires that the alarm be interconnected to the residential smoke alarm or other sounding device which will be audible in sleeping areas of the dwelling.

Question:
Are battery powered smoke detectors allowed?

Answer:
Generally, no. Section R314.4 of the 2012 Residential Code only allows battery powered smoke detectors when no commercial power source is connected to the building. If the residential aircraft hangar is a separate building not connected to the house, a battery powered smoke detector is allowed.
